AI Tool Prompt Engineering Report

Requirements

AI Tool Selection

- Choose one AI tool relevant to your field or interest.
- Examples:
    - Research tools (e.g., literature summarizers)
    - Code assistants
    - Design or media generators
    - Business or analytics tools
    - Writing assistants

Prompting Phase

A. Original Prompt

- Create your own prompt without assistance.
- This should reflect your natural way of asking the AI tool.

edit this image that it looks like night time and also put a good image lighting

edit this image that it looks like night time and also put a good image lighting

-

B. AI-Assisted Prompt

- Use a leading LLM (e.g., ChatGPT, Gemini, Claude, DeepSeek) to:

- Improve your prompt
- Make it more detailed, structured, or optimized

can you give me an improved prompt so i will get a better output (edit this image that it looks like night time and also put a good image lighting)

Here's a stronger, more detailed prompt you can use to get a higher-quality edit:

Improved Prompt:

"Transform this outdoor volleyball scene into a realistic nighttime setting. Replace the sky with a deep, dark blue night sky with subtle clouds and faint moonlight. Add soft, cinematic lighting coming from overhead court lights or nearby street lamps, casting natural shadows on the players and ground. Adjust overall exposure to be darker but keep subjects clearly visible with balanced highlights and shadows. Enhance contrast and color grading with cool tones (blues and purples) while maintaining natural skin tones. Add gentle glow and light reflections on surfaces for realism. Keep details sharp and avoid over-darkening the subjects. The final image should look like a professionally lit night sports scene."

Optional add-ons (if your tool supports it):

- "Add slight rim lighting around subjects for depth"
- "Include subtle lens glow from light sources"
- "Maintain realistic noise levels for nighttime photography"

If you tell me what app or AI tool you're using (Photoshop, Lightroom, Midjourney, etc.), I can tailor this prompt specifically for it 👍

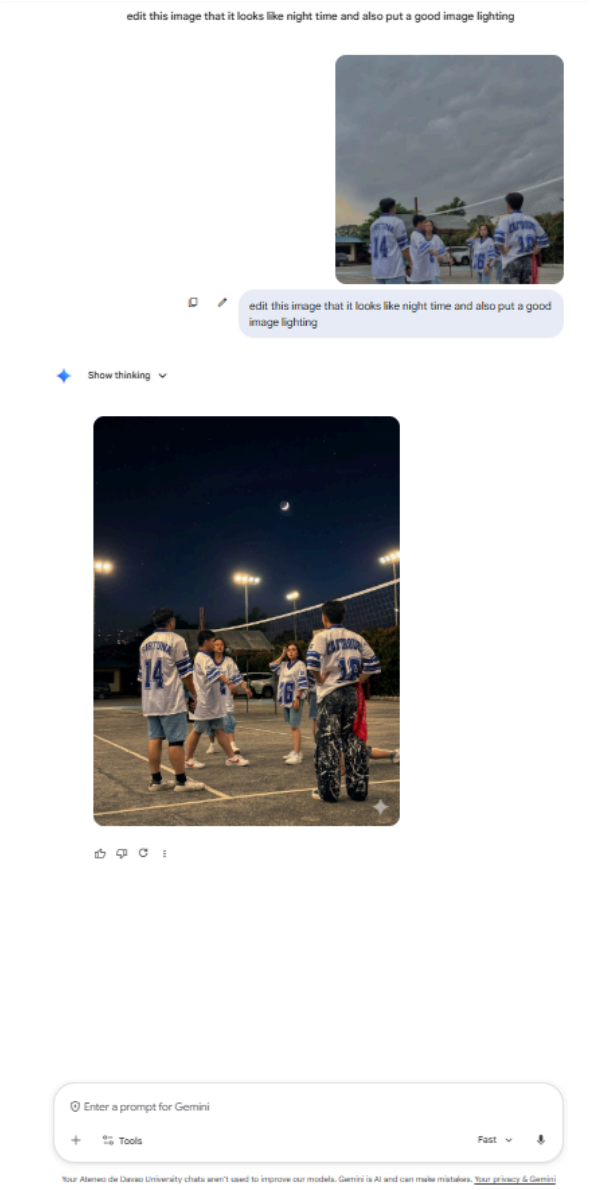
2. AI Tool Overview

- Google Gemini
- Edit image
- I want to enhance my image and make it night time.
- ChatGPT

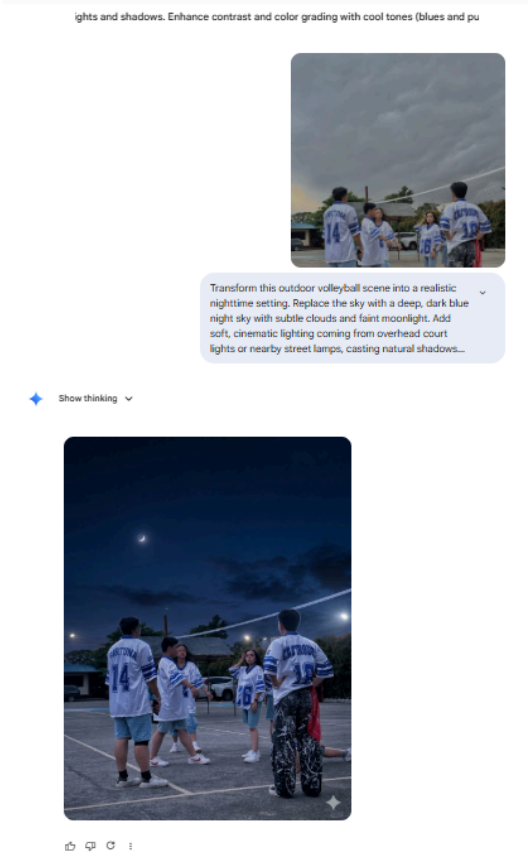
3. Original Prompt



-

4. AI-Assisted Prompt

- I used ChatGPT



- 
5. Comparison and Analysis

Analysis and Reflection

1. The difference between these two images is honestly pretty striking once you start paying attention to the details. The first one tries to turn a daytime scene into night, but it goes way too hard on the dramatic effects. The lighting is super harsh, the sky looks almost cartoonish with that giant glowing moon, and nothing really blends naturally. It feels less like a photograph and more like someone just cranked up a bunch of filters and called it a day. You can tell something's off even if you can't immediately name why.
2. The second one, though, actually works. The lighting is way more subtle—soft shadows, balanced highlights, and the players don't look like they're standing

under a spotlight while everything else disappears. The sky is dark without looking fake, and you can still make out details like the texture of the jerseys and the court. It actually looks like a real game being played at night under stadium lights, which is exactly what you'd want from something like this.

3. What made the difference was the prompt. The first one probably just said something vague like "make it night" and let the AI run with it. The second gave actual direction—adjust exposure carefully, keep the subjects visible, balance the shadows naturally, use cool tones, add realistic noise. Those small instructions forced the AI to think about realism instead of just slapping on a night filter and calling it done.
4. Honestly, this taught me that prompt engineering is way more specific than I thought. You can't just describe what you want and hope for the best. You have to tell the AI exactly what "good" means—soft shadows, balanced light, don't lose detail, keep it believable. The little things matter way more than the big picture sometimes, and that's something I'll definitely remember going forward.
